

CAR-112

Goldsboro Railroad Station

Henderson

Private

Fourth Quarter 19th Century

The structure's design is representative of many small rural late 19th Century railroad stations. The predominant feature is the hipped gable roof which gently slopes from the ridge to above the walls where it flares out to form a covered way on all sides of the building. The overhang is supported by curved brackets and the ends of the rafters are shaped. The lower half of the wall is finished in a different material than the top and is either the result of the building having been moved from its original brick foundation as at Chestertown or it was designed to have two materials. It is almost identical to the Federalsburg Depot.

### DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Goldsboro Railroad Station is located on Maryland Route 311 approximately .5 mile south of the intersection of Route 311 and Bee Tree Road in Henderson, Caroline County, Maryland. This railroad station has been moved from Goldsboro to Henderson and restored to serve as an office for the Caroline Acres Trailer Park.

The structure's design is representative of many small, rural late nineteenth century railroad stations. The predominant feature is the hipped gable roof which gently slopes down from the ridge and then flares out from the building in a wide overhang to provide shelter on all four sides of the building. The brick chimney is centrally located along the ridge of the roof. There is a single hipped gable dormer with a four pane window on the east and west sides of the roof. The buildings chief ornamental features are serpentine rafter ends and shaped brackets with a wide arch supporting the overhang of the roof. There are five brackets on the east and west facades and three brackets on the north and south facades.

The single room, rectangular plan has two entrances on both the east and west facades. Between the two doorways on the west facade is a centrally located double window with horizontal pane 6/6 sash. The north and south facades have similar central double windows. On the east facade, the central double windows protrude in a windowed bay so that the stationmaster could view the tracks in both directions. The doors have ten horizontal panes and a single panel lower section. The structure's exterior wall has a shingled upper section and a lower section of narrow clapboards, with a strip of molding between the two sections. The station rests on a new concrete foundation.

## STATEMENT OF SIGNIFICANCE

The Goldsboro Railroad Station is a significant remnant of a period in American history when the railroads were a dominant daily force and affected the society in numerous ways. This station displays some of the rural features of the railroad stations, but also has familiar Victorian characteristics which set it apart at the time of its construction as a specimen of contemporary architecture for the rural people. The remodeling and commercial adaptive use of the Goldsboro Railroad Station is one means of preservation for future generations.
